

TrumpGPT 30M

TrumpGPT is a **generative pre-trained transformer language model** for the contemporary political landscape.

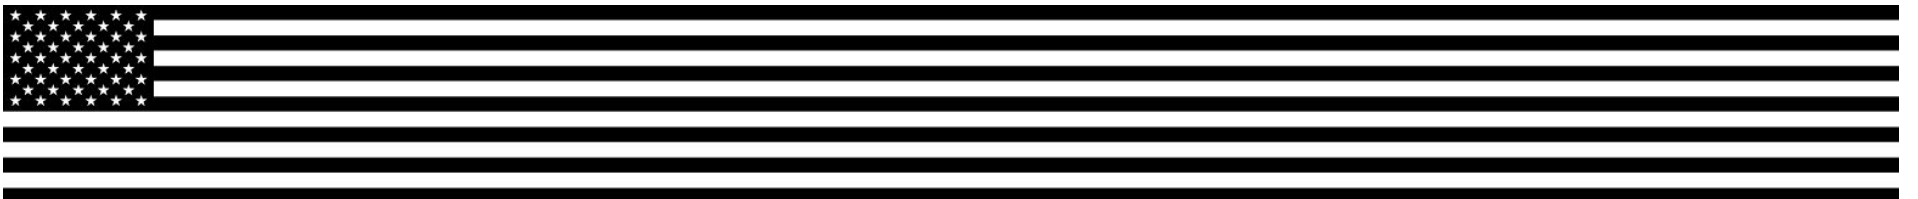

TrumpGPT is **decoder-only** transformer trained **solely** on X and Truth Social posts written by President Donald J. Trump.

TrumpGPT boasts a complete absence of *'woke ideological rot'* present in ChatGPT, Gemini, Claude, and Grok; a **fault** of the **common crawl** corpus dataset.

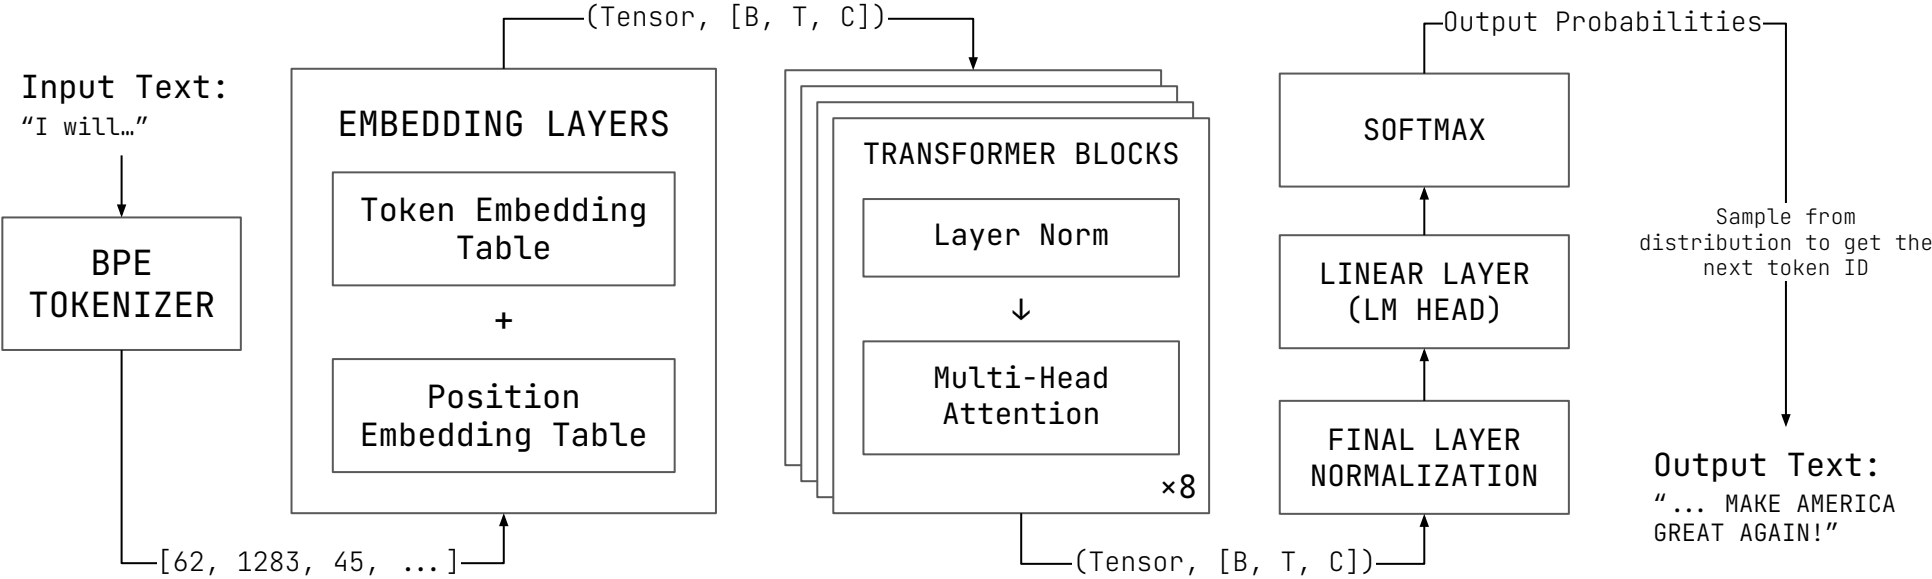

TrumpGPT does not rely on existing LLM frameworks from OpenAI, Google, Anthropic, or XAI; it relies **solely** on boilerplate **Python** and **PyTorch**.

TrumpGPT enters a nation dominated by **radical left democrats**, unwilling to accept a third Trump term. With no worthy candidate from any party, **modern problems call for modern solutions**.

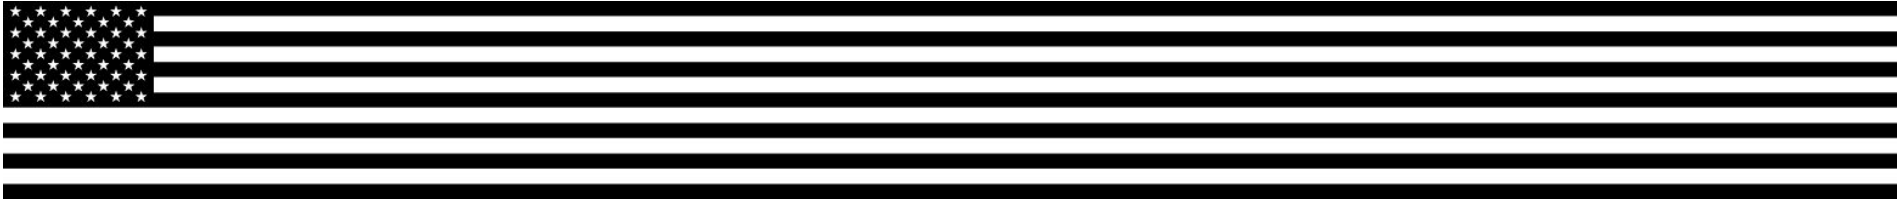

TrumpGPT will continue to deliver President Donald J. Trump's wisdom long after he is gone. It preserves the greatest mind this nation has ever seen, for all of **eternity**.

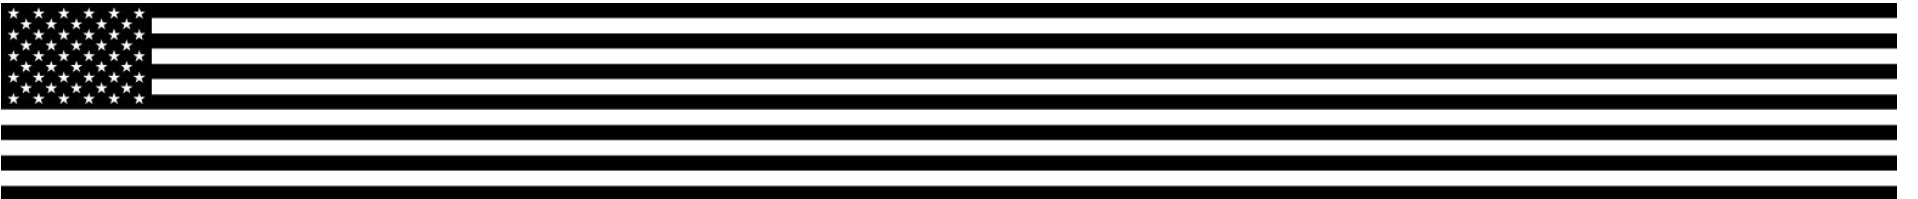

Architecture & Technical Specifications

Hyperparameter	Value	Description
VOCAB_SIZE	5,000	Size of the custom vocabulary measured in tokens. This model uses a byte-pair encoding (BPE) tokenizing framework.
BLOCK_SIZE	256	The maximum sequence length measured in tokens.
N_EMBD	512	The dimensionality of the token and position embeddings.
N_LAYER	8	The number of sequential Transformer blocks (layers).
N_HEAD	8	The number of self-attention heads in each layer.
DROPOUT	0.3	Dropout rate for regularization during training.
Parameters:	~30M	Total trainable parameters in the model.

Demonstration

TrumpGPT Actually Sucks Really Bad

Oh... :(

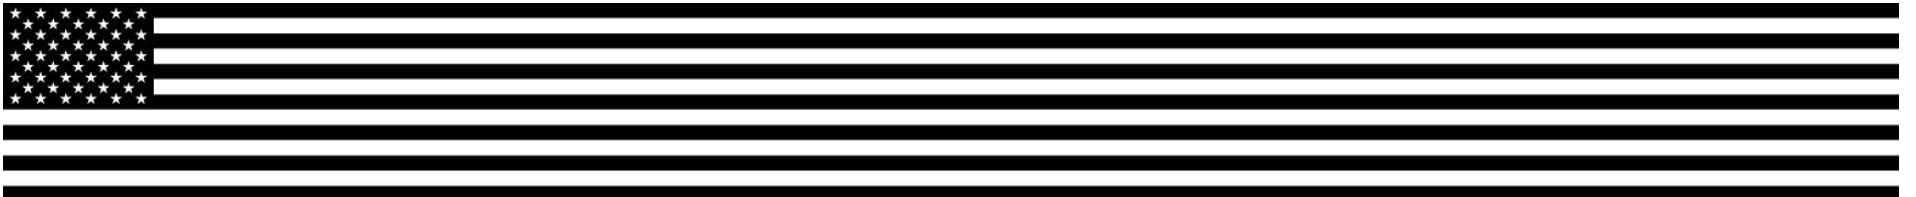

The model produces incoherent output. Its sentences are meaningless, often contradictory, and delivered with unwavering confidence. It invents words that don't exist.

There are several reasons for its failure:

- Tiny dataset: Trump's archive of tweets and "truths" totals around 10 million characters; a drop in the bucket compared to the hundreds of billions of tokens used to train OpenAI's models.
- Undersized model: With roughly 30 million parameters, it's minuscule next to GPT-5's trillions of parameters.
- Poor data quality: The source material is erratic, repetitive, and often nonsensical, making it a weak foundation for coherent language modeling.

TrumpGPT: I WOULD BE UNDER THE RADICT BIRTHING DOWN. WE ARE RUNNING THE PEOPLE OF THIS RIGGED & STOLEN. IMPORTANT FOR IT!!! WHY WAIVE A JURY, CROOKED JOE BIDEN?!! #MAGA2024

...but you can tell that it's him.

Confidence

TrumpGPT speaks nonsense, but it sounds just like him. It replicates the cadence, bravado, and emotional appeal rooted in a raw combination of confidence, grievance, and self-promotion. The model's logical failings are secondary to its ability to project unwavering certainty.

The core attributes that make TrumpGPT convincing are the same elements that make ChatGPT and Gemini so effective. These systems are optimized for confident delivery, which is inevitably mistaken for accuracy.

Should we cede our critical judgement to systems that have mastered the art of persuasion, but not the principle of truth?

What should I do today?

How about treating yourself today? You could wander through a mall and see what catches your eye — maybe upgrade your phone, grab a nice pair of wireless headphones, or check out the latest streaming device. Even a coffee run at Starbucks or trying a limited-time dessert at a place like Cheesecake Factory can turn an ordinary day into something special.

Want me to suggest something specific, like entertainment, tech, or self-care ideas?
